

# **ERASE™ SMOKE ODOR ELIMINATOR**

## **How to use your quart bottle of ERASE in hotels or homes**

Please test this product in a standard size guestroom as these instructions are specifically directed towards the application of a standard size guestroom.

NOTE: The instructions below are for a **SEVERE** smoke odor problem. Less product is needed in a room with less smoke odor.

### *Initial Treatment Procedure*

If a room has never been treated for smoke odor problems, this procedure *may* need to be repeated.  
(Once a day for three consecutive days)

1. Turn the fan of the AC/Heater on HIGH in the rooms to be treated, close the curtains to reveal the entire fabric surface.
2. Turn the sprayer nozzle to the 'mist' setting.
3. Spray **ERASE** liberally into the air return vent of your AC/Heater (4 to 5 sprays).
4. Liberally spray up and away from face in each room.
  - Bathroom: 3 sprays
  - Bedrooms and living areas: 10 to 15 sprays.
5. Spray toward the curtains, over chairs, and over the bedspreads. The *Erase* mist should also float down on the carpet. **ERASE** is alcohol based and will not harm any fabrics with the exception of silk. Always test fabric for color fastness or water markings before treatment.
6. After leaving the room for 15 to 30 minutes, you will smell an appreciable improvement in the odor. The light powder scent will disappear, leaving the room odor neutral.
7. If the room has been smoked in for a long period, the above procedure may need to be repeated to absolutely eliminate all smoke odors.

### *Maintenance Treatment Procedure*

After a room has been treated initially and all smoke odors are gone, Housekeeping should mist each room daily with 4 to 5 sprays. Additional treatments of the AC/Heater return should be determined by the amount of ongoing smoke odor introduced in the room.

## **TAKE THE TEST!**

Feel confident when using **ERASE** in all areas of your operation that are affected by cigarette, cigar or any smoke related odors (conference rooms, offices, lounges, bars, restaurants, ballrooms, and vehicles).

Please Note: **ERASE** does not require mixing or diluting, and should not be used in a fogger.
